SUMMARY

Frontend Engineer with 2 years of production experience building React and TypeScript applications for enterprise B2B and consumer products across fintech, insurance, and logistics. Own complex, multi-module UIs end-to-end — role-based dashboards, schema-driven forms, real-time data, and reusable component systems — and ramp onto unfamiliar codebases fast. Currently shipping a live restaurant SaaS solo on the side.

EXPERIENCE

Software Engineer

Aug 2025 – Present

TartanHQ

Gurgaon, India

- Own core modules of an enterprise B2B group health insurance platform (GHIOS, for Bajaj) spanning **four role-based consoles** — Insurer, Broker, HR, and Employee — in **React, TypeScript, Jotai, and TanStack (React) Query**, including a **5-step Quote Journey**, Broker Onboarding, and the HR Employee Directory.
- Designed a schema-driven **reusable CSV bulk-upload component** (config-driven validation: required/type/enum/regex, per-field errors) adopted across 10 flows in all four consoles — with a downloadable error report, and partial-success handling (uploads valid rows, skips invalid) plus a re-uploadable 'failed rows' file in the onboarding flow.
- Built employee census with **3 ingestion modes** (manual, CSV, HRMS sync) and **coverage-aware enrollment/endorsement flows** (dependent gating by policy cover type, policy-scoped sum-insured), cutting invalid submissions before they reach the backend.
- Built a reusable **component + centralized multi-validator form architecture** (filter popovers, bulk/file upload, data tables, multi-step steppers) adopted across products to cut duplicate UI code; translated Figma into a consistent design system (status pills, stat cards, selectors).
- Drove self-initiated performance work — route-level **code-splitting, lazy loading, and re-render audits**; awarded **Rising Star of the Quarter** for cross-team delivery and proactive ownership.

Software Engineer

Jul 2024 – Jul 2025

RapidShyp

Gurgaon, India

- Built a new **Warehouse Management System from the ground up** — inbound receiving, bin-level inventory, picking workflows, and dispatch — owned from component design through API integration.
- Refactored a large multi-step Create Order form to **React Hook Form + Yup**, replacing uncontrolled inputs with schema-based field-level validation — eliminating a class of silent runtime failures and reducing component complexity.
- Built a real-time **Help & Support panel with WebSocket chat** so ops agents resolve tickets in-dashboard, plus a Return Order module with item-level quantity validation.
- Took over and delivered a B2B **Order Management System** on a tight deadline after the original owner left mid-build, keeping full scope; recognized by QA for consistently low bug-reopen rates.

PROJECTS

Dynamu.AI | Restaurant SaaS — Co-founder & Solo Frontend Engineer | [Live](#)

- Shipped a production restaurant SaaS **solo**, live and in daily use at Heeralal Restaurant, Ajmer — **three portals** (Customer, Restaurant Admin, Super Admin) in **React 19, TypeScript, Tailwind CSS v4, Vite** with role-based access control.
- Engineered a real-time order pipeline with **Socket.IO** across three authenticated channels, driving a live Kanban board — orders flow from QR scan to kitchen to served with no page refresh — plus QR table sessions and live occupancy tracking.
- Added an **AI chat assistant** with **SSE streaming**, Web Speech voice input, and context-aware menu recommendations; XLSX bulk menu import, revenue analytics, and Petpooja POS integration. State managed with **Zustand**.

TECHNICAL SKILLS

Languages: TypeScript (generics, discriminated unions, strict mode), JavaScript (ES6+), HTML5, CSS3

Frameworks / Libraries: React, React 19, Next.js, Vite, React Hook Form, Yup

State & Data: Jotai, Zustand, React Context, TanStack Query (React Query), REST APIs

Real-time: Socket.IO, WebSockets, Server-Sent Events (SSE), Web Speech API

UI & Styling: Tailwind CSS (v3 & v4), Chakra UI, ShadCN/UI, Responsive & Mobile-first design

Practices: Component-driven design systems, Performance optimization (code-splitting, lazy loading), Figma-to-code, Code reviews, Agile / Jira

Tooling: Git, GitLab, Jira, XLSX / CSV data handling

Previously used: Node.js, Express.js, MongoDB, MySQL

EDUCATION

The LNMIIT, Jaipur <i>B.Tech, Computer Science Engineering — CGPA 7.02</i>	Aug 2020 – May 2024
--	---------------------

ACHIEVEMENTS

- **Rising Star of the Quarter (Q3 FY2025–26)** at TartanHQ, for cross-team delivery and proactive module ownership.
- Solved **500+** DSA problems on [LeetCode](#) and [GeeksforGeeks](#).
- **Top 2.75% in JEE Main** (out of 1.2M candidates); **AIR 16,000** in JEE Advanced.
- Led design & branding for **Desportivos**, LNMIIT’s annual sports fest — 50+ digital/print assets for 5,000+ attendees.
